

This image is just a small sample of what is available in our drawing packages. The complete drawing package will allow the home bulder with limited tools to construct a finished frame from your own tubing or one of our kits and know that the parts are correct. You can inspect the parts prior to welding by laying the ready to weld part on the full size detail drawing of the component. Several pieces can be welded and inspected as you go by this process.

You don't think your garage floor is flat enough to weld your frame together on! We will be offeing a simple welding table/fixtue to insure flatness.
